Background

The wtCas9 is a recombinant Streptococcus pyogenes Cas9 protein (wild type form) purified from E. coli. Cas9 protein can form a very stable ribonucleoprotein (RNP) complex with the guide RNA (gRNA). The RNP complex can recognizes the target site by matching gRNA with the genomic DNA sequence and make DNA breaks within 3 bases from the NGG PAM. With the CRISPR/Cas9 system, researchers can valid gene editing assay in cells or other kinds of animals.
