SARS-CoV-2 Trimeric Spike Protein (Delta B1.617.2 Variant), His Tag, HEK293

Catalog Number	LDG008PVM
Package	5 μg / 20 μg / 100 μg / 1 mg / Customized package

For full product information, images and publications, please visit our website.

Specifications

Species of Origin
SARS-CoV-2

Expression System
HEK293

Affinity Tag
His Tag (C-term)

Concentration
Please refer to the product label.

Storage Buffer
Liquid. Phosphate buffered saline, pH 7.4.

Purity
>98% as determined by SDS-PAGE analysis.

Molecular weight
The protein has a calculated MW of 133.12 kDa.
The protein migrates above 180 kDa under reducing condition (SDS-PAGE analysis).

Form
Liquid

Background

Coronaviruses (Delta B1.617.2 Variant) are enveloped positive-sense RNA viruses. Spike protein on the viral envelope and the cognate receptor on the surface of host cells that are essential for entry into host cells upon receptor binding and membrane fusion. Spike proteins are target for neutralization antibody, and mediate membrane fusion and virus entry.Trimeric spike protein is about 180 kDa, and contains two subunits, S1 and S2, mediating attachment and membrane fusion.

Synonyms

Spike glycoprotein, S glycoprotein, E2, Peplomer protein

Uniprot ID

#P0DTC2

Sequence Note

Ser13-Pro1213

Instruction

Shipping

The product is shipped with polar packs. Upon receipt, store it immediately at -80°C or lower for long term storage.

Stability & Storage

This product is stable after storage at:

- -80°C for long-term storage under sterile conditions.

Avoid repeated free-thaw cycles.
