Datasheet

Background

Interleukin 32 alpha (IL-32 α) is an 18 kDa cytokine with 131 amino acid residues and one of the IL-2 splice variants. IL-32 α is primarily secreted from inflammatory cells, such as NK cells, T-cells, peripheral blood mononuclear cells (PBMCs), and monocytes. IL-32 alpha is a proinflammatory cytokine regulating IL-6 by interaction with protein kinase C(PKC). It also interacts with paxillin, integrin, and focal adhesion kinase 1 (FAK 1).

Synonyms

Natural killer cells protein 4, Tumor necrosis factor alpha-inducing factor, Interleukin-31
