Background

Sonic Hedgehog protein (SHH) plays a critical role in development of embryonic morphogenesis which mediate the process of organogenesis and central nervous system. The sonic hedgehog signal pathway also plays an important role in cancerous tumors like embryonic cerebellar tumor, prostate cancer tumours and medulloblastoma. SHH binds the receptor (Ptc1) that induces the smo protein to activate the downstream pathway, which induces the shh target gene expression.

Synonyms

Sonic hedgehog protein, HHG-1, Shh unprocessed N-terminal signaling and C-terminal autoprocessing domains, SHH

Instruction

Reconstitution

It is recommended to reconstitute the lyophilized protein in sterile H₂O to a concentration not less than 200 µg/mL and incubate the stock solution for at least 20 min to ensure sufficient re-dissolved.
