### Overview

#### **Description**

Affinity purified anti-cMyc antibodies, developed in mouse, were conjugated to NHS-sepharose. It is an efficient technique for isolating recombinant proteins or mammalian expression proteins. The cMyc epitope system relies on the peptide (N-Glu-Gln-Lys-Leu-Ile-Ser-Glu-Glu-Asp-Leu-C), which is able to react with N- and C- terminal cMyc tagged fusion proteins and may be used for the immunoprecipitation or immune affinity purification. The purified antibody is immobilized at 3-5 mg antibody per mL of 50% slurry and this kit allows a rapid and efficient affinity purification of active cMyc fusion proteins. The affinity resin allows an efficient binding of cMyc fusion proteins without the need for preliminary steps and calibrations. The affinity bound cMyc fusion proteins can be efficiently eluted from the resin by acid condition. The eluted proteins can be used for characteristic analysis.

#### **Product Note**

The optimal protein concentration of the cell lysate should be determined by the end user.

## **Specifications** Clonality Host Monoclonal Mouse **Application** Conjugation Immunoprecipitation, Immunoaffinity Purification Sepharose **Specificity Sample Type** Recognizes cMyc tag on either the N- or C-Cell lysate terminus of the recombinant fusion protein.

Tainan Headquarter

**Taipei Office** 

### **Binding capacity**

The binding and elution capacity of 1 mL Mouse anti-cMyc tag mAb sepharose are commonly more than 1 mg of cMyc fusion protein.

### Instruction

### **Shipping**

The product is shipped with polar packs. Upon receipt, store it immediately at 2-8°C.

### Stability & Storage

This product is stable after storage at:

2-8°C for unopened product

Please refer to product manual for storage constructions

**Disclaimer:** For Research Use or Further Manufacturing Only.
